## CPR (Cut-Paste-Reverse)

Consider the list of integers $1,2, \ldots, \mathbf{N}$. On this list you can perform a series of cut-paste operations. A cut-paste operation $<\mathbf{x}, \mathbf{y}, \mathbf{z}>$ consists of cutting the sequence between the values $\mathbf{x}$ and $\mathbf{y}$ and inserting the sequence immediately after the value $\mathbf{z}$ ( $\mathbf{z}$ can also be 0 to designate an insertion at the beginning of the list). A triplet $\langle\mathbf{x}, \mathbf{y}, \mathbf{z}>$ constitutes a correct cut-paste operation if

- $\mathbf{x}$ appears before $\mathbf{y}$ in the list, or $\mathbf{x}=\mathbf{y}$;
- $\mathbf{z}$ appears outside the sequence from $\mathbf{x}$ to $\mathbf{y}$, or $\mathbf{z}=0$.

## Task

Find a series of correct operations that reverses the list, so that after performing the operations the list becomes $\mathbf{N}, \mathbf{N}-1, \ldots, 2,1$. The fewer operations you require, the higher your score will be.

## Input data

The file $\mathbf{c p r}$.in contains a single integer number $\mathbf{N}$, representing the length of the list.

## Output data

The file cpr.out must contain a number $\mathbf{M}$ on the first line, representing the number of cut-paste operations. Each of the following $\mathbf{M}$ lines must contain three numbers $\mathbf{x} \mathbf{y} \mathbf{z}$ representing an operation.

## Limits and constraints

- $1 \leq \mathbf{N} \leq 5,000$
- Time limit: 0.1 seconds
- Memory limit: 64 MB

## Scoring

Test cases will be scored individually. For every test, if your solution requires $\mathbf{M}$ operations, you will earn points as follows (slashes denote integer divisions):

- $100 \%$ of the points if $\mathbf{M} \leq \mathbf{N} / 2+1$;
- $80 \%$ of the points if $\mathbf{N} / 2+1<\mathbf{M} \leq 2 * \mathbf{N} / 3$;
- $60 \%$ of the points if $2 * \mathbf{N} / 3<\mathbf{M} \leq 3 * \mathbf{N} / 4$;
- $40 \%$ of the points if $3 * \mathbf{N} / 4<\mathbf{M} \leq 4 * \mathbf{N} / 5$;
- $20 \%$ of the points if $4 * \mathbf{N} / 5<\mathbf{M} \leq 5 * \mathbf{N} / 6$;
- 0 points if $\mathbf{M}>5 * \mathbf{N} / 6$.

## Example

| cpr.in | cpr.out | Explanation |
| :--- | :--- | :--- |
| 6 | 4 | The initial list is 123456 |
|  | 260 | After the first operation, the list becomes 234561 |
| 450 | (The operation 1 16 would have had the same result.) |  |
| 364 | After the second operation, the list becomes 452361 |  |
| 650 | After the third operation, the list becomes 436521 |  |
| After the fourth operation, the list becomes 654321 |  |  |
|  |  | This solution earns full points as 4 $=6 / 2+1$. |
