## Frequent

An astrobiologist studies life on the planet Alphabet. Life here is DNA-based and there are 26 nucleotides. Consequently, the DNA of a life form from Alphabet can be represented as a string of lowercase letters of the Latin alphabet. The astrobiologist has sequenced the DNA of $\mathbf{K}$ life forms, not necessarily distinct, with a total length of $\mathbf{N}$ nucleotides. Now she would like to find strands (substrings) of DNA that occur frequently among these life forms. Let $\mathbf{L}(\mathbf{i})$ be the length of the longest strand of consecutive DNA nucleotides common to at least $\mathbf{i}$ life forms, for $2 \leq \mathbf{i} \leq \mathbf{K}$. Note that $\mathbf{L}(\mathbf{i})$ can be 0 .

## Task

Help the astrobiologist compute the array $\mathbf{L}$.

## Input data

The file frequent.in contains an integer number on the first line, $\mathbf{K}$, representing the number of life forms. Each of the following $\mathbf{K}$ lines contains a non-empty string of lowercase letters, terminated by a newline character.

## Output data

The file frequent.out must contain $\mathbf{K}$ - 1 lines with the values $\mathbf{L}(2), \mathbf{L}(3), \ldots, \mathbf{L}(\mathbf{K})$, each on its own line.

## Limits and constraints

- $2 \leq \mathbf{N} \leq 200,000$
- $2 \leq \mathbf{K} \leq \mathbf{N}$
- Time limit: 0.5 seconds
- Memory limit: 128 MB

## Subtasks

Test cases will be scored individually.

| Subtask | Percentage of test cases | Additional input constraints |
| :--- | :--- | :--- |
| 1 | $30 \%$ | $\mathbf{N} \leq 10,000$ |
| 2 | $40 \%$ | $\mathbf{N} \leq 100,000$ |
| 3 | $30 \%$ | none |

# Romanian Master of Informatics

## Example

| frequent.in | frequent.out | Explanation |
| :--- | :--- | :--- |
| 6 | 5 | atter appears in two of the strings |
| matter | 3 | $m a t$ appears in three of the strings |
| animate | 2 | $m a$ (or $a t$ or te) appear in four of the strings |
| pattern | 2 | $m a$ appears in five of the strings |
| thermal | 1 | $a$ appears in all the strings |
| domain |  |  |
| teammate |  |  |
